28th August, 2018

Letter of Recommendation for Isa Al Doseri

Suprath Technologies (www.suprath.com) is an AI software start up, focused on solving problems in enterprises by leveraging AI technologies like Machine Learning, Deep Learning, NLP and Computer Vision.

Isa Al Doseri did a Machine Learning Internship with our organization for 5 months between 8th of January and 8th of May, 2018. He contributed to two major bodies of work. One involved using Neural Networks to detect early stages of cancer in the human breast. The other was in the area of Natural Language Generation.

In both the projects, Isa's contribution was exceptional. Despite not having a programming background, he demonstrated an ability to understand the concepts well and learn rapidly. In particular, his approach to problem solving in a structured manner stood out. His ability to research new areas, understand the concepts and implement it rapidly was critical to a startup organization such as ours.

We wish Isa only the very best in his career.If you need any other information, please do not hesitate to contact me at **nagaraj@suprath.com**
